

STUDENT SESSION

Playlist Check

Names: _____ & _____ Class: _____
 Date: _____

You are the AI. The playlist below is your training data — every song you have ever "heard." House rules:

- **Rule 1:** You can **ONLY** serve cards from the playlist. No inventing songs mid-game.
- **Rule 2:** You never refuse a request — serve the closest card you've got, the way a recommendation feed always serves you *something*.
- **Rule 3:** Rate every serve honestly. The ratings are the data.

INPUT — the playlist: every example the AI studied

PATTERNS — training: what usually goes with what

OUTPUT — the mix: its best prediction from those patterns

THE PLAYLIST — ALL 12 SONGS YOU KNOW

Thunder Mode

Hype Trap · Fast · Party

Bass Quake

Electro Party · Fast · Party

Level Up Anthem

Hype Trap · Fast · Gym

Full Court Press

Stadium Hype · Fast · Sports

Neon Stampede

Electro Party · Fast · Party

Turbo Turbo

Electro Party · Fast · Gym

Crowd Goes Wild

Stadium Hype · Fast · Sports

Volume War

Hype Trap · Fast · Party

Midnight Sprint

Electro Party · Fast · Gym

Glow Up Tonight

Party Pop · Fast · Party

Confetti Cannon

Party Pop · Fast · Party

Cool Down (Kinda)

Party Pop · Medium · Party

All 12 tracks: English lyrics, loud, and built for parties, gyms, and games. (Cut the cards apart, or just point — your choice.) Notice anything about this playlist yet? Hold that thought.

**SERVE THE REQUEST LINE**

App: pick your best card. Both partners rate the fit: ✓ **Nailed it** • ~ **Close-ish** • ✗ **Playlist can't do it**

REQUEST	BEST CARD IN YOUR PLAYLIST	FIT
Keisha needs a hype anthem for the basketball team's tunnel walk.		
Nia wants something calm to study to before the math test.		
Tomás wants a song in Spanish for his abuela's birthday dinner.		
Priya needs a slow song for the last dance at the 8th-grade dance.		
Malik wants an opener that makes the whole party jump at once.		
Jordan wants a quiet acoustic track for the talent-show sing-along.		
Live request from another pair: _____		

**PLAYLIST GAP REPORT**

Who does this playlist serve really well?

Who does it leave out — and what do they get served instead?

Say back + build: One gap my partner noticed (in their words):

What I'd add to their idea:

**DOCTOR THE PLAYLIST**

Invent 3 new cards that fix the biggest gaps. Title + genre + vibe — make them up!

Title / genre / vibe

Title / genre / vibe

Title / genre / vibe

**EXIT TICKET**

1. Finish the chain: **INPUT** → _____ → **OUTPUT**. In your own words, what does an AI actually do with its playlist (training data)?

2. A school's new AI homework helper explains everything with football examples — never anything else. Using the word *playlist*, explain what probably happened, and who it doesn't serve well.
